

# **SYSTEM AND METHOD FOR INCIDENT REPORTING, INFORMATION GATHERING, RECONSTRUCTING AND ALERTING**

## **ABSTRACT**

A system and method for processing information about an incident is  
5 provided. The system comprises two or more communication devices (104, 112-126)  
in communication with each other and a central authority (128) capable of receiving  
data from the communication devices. Each communication device (104, 112- 126)  
includes a media sensor (222) to collect data relating to an incident event (102). One  
communication device (104), in response to a user activation input, transmits a  
10 request signal to one or more other communication devices (112-126). Any  
communication device (112-126) that receives the request signal may collect data  
relating to the incident event (102) in response to the request signal. The central  
authority (128), after receiving the data collected by the wireless communication  
devices (104, 112-126), performs an action in response to receiving the data.
